

Eat Store Refits, Roll Out Programme

Client: Eat

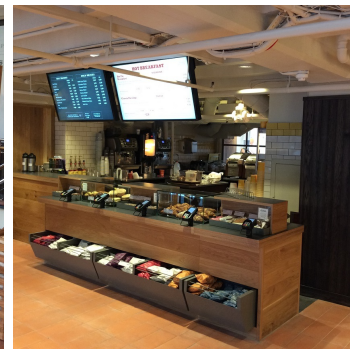

Roll Out Programme Duration: 50 weeks

We were awarded a roll out of 15 EAT store refits over a period of 50 weeks.

The refits included a complete overhaul of the existing finishes, servicing and modifications of the HVAC systems, redesign of the unitary and refrigeration units, along with a complete new lighting scheme.

The projects were unusual in the fact that this entire makeover was to be carried out whilst the stores were trading, meaning what was taken down had to be replaced and cleaned before the next morning's trade. Attention to program and logistics, and ensuring the right materials and trades were on site at the right time with a "just enough, just in time" mentality needed, as there was no room for storing any materials, and as the projects were all carried out at night, any materials not on site would not be available until at least the next shift.

The projects were nationwide from London to Liverpool and at some points there were up to 3 live projects at any one time.
